

New Equine Bluetooth Cardiac Monitoring System Provides Remote EKG, Heart Rate, Performance and Foaling Monitoring with Wireless Sensors

STARKSport 'smart patch' - Powered by isansys technology, provides real-time, medical-grade, cardiac EKG data, on-site, without the need to trailer your horse to the vet, saving time and eliminating stress for your stallion, gelding, colt, filly or mare.

(Columbus, OH – March 5, 2018) STARK Industries achieved a “first” in the realm of veterinarian medicine in North America with their STARKSport ‘smart patch’ technology, powered by isansys, with the generous help of Tim Funk – Equine Specialist and Co-Founder, Stockhands Horses For Healing, and gelding “Junkyard Jake”, a rescue horse.

Tim Funk graciously volunteered his time and facilities to assist in STARK’s smart patch ‘tech demo’ when he heard of the STARKSport’s ability to visually display a horse’s “LIVE” streaming EKG, heart rate and motion detection, all in real-time, wirelessly via Bluetooth.

“The STARKSport’s Bluetooth capabilities allow for unobtrusive, remote, continuous cardiac monitoring, including motion and position

detection” Liz Swantack – STARK Industries, Nurse Consultant and Co-Director of Business Development, stated.

“The STARKSport ‘smart patch’ could provide an added level of assurance in overseeing and maintaining the health and safety of foaling mares and their foals.” Tim Funk commented.

Craig Owens, CEO of B2B Power Partners, Columbus, OH, envisions a paradigm shift in equine veterinarian, horse farm and boarding care “The Isansys ‘smart patch’ technology gives you continuous, streaming, beat-by-beat data, in real-time. The STARKSport’s data quality is unmatched in the industry” Craig added.

Stockhands Horses For Healing, Delaware, OH, is a 501(c)(3) non-profit organization providing equine facilitated therapies to veterans, adults and children with developmental, mental, physical, and emotional disabilities.
